Research Product Proposal

The purpose of this proposal is to inform discussion about research products from the *Making it Work* project. Examples of research products might include conference abstracts, a paper in a journal, a research report, or student work. Through discussion the Making it Work Community-Based Research (CBR) Team will provide their feedback and consent for the research output and have the opportunity to collaborate moving forward.

This proposal will be sent around to the CBR Team at least ***one week*** ahead of a planned discussion, providing enough time for the team to reflect on the proposal and come prepared with any questions.

1) **What kind of Research Product? Where will this product be disseminated?**

2) **A brief outline** (*What are you proposing to write about or present? What data is being used? What are the key messages?*)

3) **The process for engagement with the CBR Team** *(Please see Making it Work KTE/Authorship Guidelines for key principles – How will the study team help to develop the product? How will co-authorship or presenting be managed?)*

4) **Benefit this could this provide to the community?** *(What might be parallel community-tailored products?)*
